

## TASK FORCE FOR A RESILIENT RECOVERY

### BACKGROUND

#### Not your typical recession.

The COVID-19 pandemic has locked the world in what will probably be the deepest global recession since the 1930s. In Canada, it has resulted in record job losses that are unique not only in their scale, but also their scope and the types of jobs lost. The burden on Canadian households, businesses, communities and vulnerable populations has been extreme and governments across Canada have responded by investing in much-needed relief measures.

As Canada comes out of the COVID crisis, governments and the private sector will turn their attention to building a long-term economic recovery.

The challenge of recovery will be how to get Canadians back to work quickly while also building back better. Building back better means supporting the jobs, infrastructure and growth that will keep Canada competitive in the clean economy of the 21st century. It means a recovery that ensures not only more jobs in five and ten months, but also in five and ten years. Our focus should not be simply on returning to growth, but on growing smarter and cleaner to support a more resilient future. The post-COVID economic recovery is a critical opportunity to build that future. We need to seize it.

We need to help people get back to work now, in all sectors and regions of the country, at the same time as investing in the future that Canadians want: clean, competitive and resilient.

#### About the Task Force.

The Task Force for a Resilient Recovery is an independent and diverse group of Canadian finance, policy and sustainability leaders. The 14 members are determined to make sure that Canadian governments get the best advice on building a resilient economic recovery.

The Task Force will make actionable recommendations on how governments can use a range of tools – including direct public investment, leveraging private capital, targeted tax cuts and incentives, regulatory sandboxes (to enable innovation), and behavioural ‘nudges’ – to spur jobs and generate lasting economic activity while also helping to build a clean and resilient economy.

The Task Force’s work will be informed in part by eight expert advisors, listed below. It will also be supported by dedicated economic research from leading institutions, including Smart Prosperity Institute, the International Institute for Sustainable Development and the Transition Accelerator, and their research teams at various universities. These research partners will submit background research and briefing notes, which will be made public at the same time as they are submitted to the Task Force. The Task Force will review and revise these research inputs in order to produce a final report and recommendations which reflect the broad consensus of all members. Research will draw upon cutting-edge academic concepts, insights from leading thinkers and Task Force Expert Advisors, and case studies of international success stories.

The Task Force will meet for 8 weeks beginning in May and produce its final report in July.

#### Task Force Members:

- Barbara Zvan – Former Chief Risk & Strategy Officer, Ontario Teachers’ Pension Plan
- Bruce Lourie – President, Ivey Foundation
- Don Forgeron – President and CEO, Insurance Bureau of Canada
- Elizabeth Beale – Former President and CEO, Atlantic Provinces Economic Council
